Operator · 3 分钟演示稿（简单版）

短句，简单词。英文照着念，括号里是动作。全部念完约 2 分 40 秒。

0:00–0:20 开场（主页）

> Hi, I'm Lee. This is Operator.
>
> Last month I got a zero on a homework. I did not see it. It was hidden in Brightspace, with 90 other things. Brightspace is where all our classes post homework.
>
> Operator watches Brightspace for me. It only tells me the things that matter.

0:20–0:45 过滤（「没打扰你的」卡片）

> Every 10 minutes it reads my Brightspace calendar. Then it sorts every item: urgent, good to know, or ignore.
>
> My feed has 94 items. 83 are ignored. It shows me why.

（点开「Old course」，滚一下，再点「Already past」）

> Old classes. Past dates. School notices. None of this goes to my phone. The 2 urgent ones did.

0:45–1:20 手机（举起手机）

> It talks to me on iMessage. Short messages, like this.

（展示手机上的消息）

> When a teacher moves a deadline, I get one line. Before a deadline, I get three reminders: 24 hours, 3 hours, 1 hour.
>
> And I can talk back. Watch.

（手机发语音：「我刚交了 EST 393 的 HW#3」→ 等回复 → 切回网页，HW#3 打勾）

> I said "I finished HW#3". It found the right homework, marked it done, and stopped the reminders. If it is not sure, it asks me first.

1:20–1:55 网页对话（点右下 Agent → Voice call）

> The same brain is on the website. I can talk to it.

(说："What do I have on Tuesday?" → 等它读完，字幕一个词一个词亮)

> It answers out loud, with live subtitles.
>
> I can also give it anything with a time in it. A screenshot, an email, one sentence, in English or Chinese.

(拖课表截图进页面 → 课进日程 → 点一个 Undo)

> Four classes added. One click to undo.

1:55–2:20 早报和周视图

(点顶部 Morning telegram，听 5 秒，按停)

> Every morning it reads me my day.

(切 Week 页)

> This is my week. Classes, meetings, events, deadlines. All in one place.

(点「中」切中文，再切回 EN)

> English or Chinese. Nothing to set up.

2:20–2:40 收尾

> Operator is live at myoperator.club. The code is on GitHub.
>
> We used Gemini, Photon for iMessage, ElevenLabs for voice, a GoDaddy domain, and Vultr.
>
> The idea is simple: less noise, only what matters. I have not opened Brightspace in two days. Thank you.

演示前 10 分钟

- 手机给 +1 415 605-6081 发一句 hi，预热 iMessage 线路。
- Chrome 开两个标签：主页、GitHub。麦克风权限允许。音量开大。
- HW#3 是未完成（现在全部作业都是未完成）。
- 桌面放一张课表截图，方便拖。

出问题怎么办

- 早报是提前做好的，一定能放。
- 手机 30 秒没回：给评委看之前收到的消息截图，继续讲。
- Gemini 报忙：跳过网页提问，直接演示拖截图或周视图。

评委可能问（用简单英语答）

- **How do you decide what is urgent?**

> Eight simple rules. Exams are always urgent. Due within 72 hours is urgent. A quiz within a week is urgent. Old classes, past items and school notices are ignored. No black box, I can show every rule.

- **How can other students use it?**

> Paste your own Brightspace calendar link on the Setup page. That is all. Login for many users is the next step.

- **How is it different from Canvas or Google Calendar reminders?**

> They remind you about everything. Operator filters first, explains what it filtered, and you can talk to it by text, voice or photo.

- **Why iMessage?**

> Students actually read it. Photon made it easy.
